## introduction

---

PMC Engineering (Private) Limited delivers specialised petroleum engineering solutions that surpass industry standards in methodology, quality, and performance. Led by a highly experienced management team, we offer end-to-end services—including design-build, engineering, procurement, project management, construction supervision, and commissioning.

In collaboration with trusted partners, we provide comprehensive engineering and consulting services for aviation Jet A-1 fuel transportation, storage systems, and receiving and off-loading facilities—ensuring efficient, safe, and reliable operations.

## our mission

At PMC Engineering, our mission is to surpass client expectations by delivering high-quality solutions through committed professionals and proven processes. We focus on executing projects with efficiency, meeting key goals of time, cost, and quality, while continually striving for excellence.

Guided by a clear vision and strong core values, our leadership drives long-term growth and sustainability. We uphold a culture of respect and fairness, protect our reputation, and remain focused on enhancing value for our clients at every opportunity.

Customer satisfaction remains central to our approach. Through effective resource management and strict quality control, we minimize non-conformities and deliver consistent results. This is made possible by our experienced leadership and skilled technical teams, who bring expertise and dedication to every project.

## vision & values

PMC Engineering (Private) Limited has a vision to become a regional leader in the design, engineering, project management providing construction supervision and commissioning of Aviation Fuel Storage and Fuel Hydrant Refuelling Distribution Systems for airport infrastructure.

Our ability to provide proven management experience and technical expertise results in sound, practical, and cost-effective solutions.

PMC Engineering (Private) Limited is committed to executing its Quality, Health, Safety and Environmental Objectives and Values based on its QHSE policy, customer satisfaction, moral obligation, statutory requirements and organisational commitments. The value of this integrated approach, in combination with our commitment to maintaining the highest standards of professionalism, is demonstrated by our continued service to government agencies and commercial clients.

These objectives are realistic, practical, measurable, achievable and consistent with our commitment to reduce environmental impact and prevention of injury and ill health at the work-place.

Our values are the uncompromising foundations upon which we build our mission.

## our strategies

PMC Engineering's growth strategy is anchored in diversification, performance, and partnership. We're expanding into new functional areas while maintaining strong results in our core operations.

Alongside traditional projects, we actively pursue DFBOT and Joint Venture opportunities offering strategic advice and expert execution.

We focus on building long-term relationships with clients and partners, supported by a highly skilled team and continuous investment in cutting-edge technologies.

Our success is defined by our clients' success. Through deep expertise and a clear understanding of their challenges, we deliver lasting value and trusted solutions.

## the solution

At PMC Engineering, we offer end-to-end solutions for every phase of an aviation fuel development project—from initial concept and planning to design, procurement, bid advisory, construction management, site supervision, commissioning, and final handover.

As a true “One Stop Solution,” we manage the entire lifecycle of a project, streamlining delivery and reducing complexity for our clients.

Our multidisciplinary expertise allows us to provide a full suite of services, including strategic planning, engineering design, environmental consulting, project management, and operational support—ensuring value at every stage.

We are committed to helping clients achieve their investment goals efficiently, while upholding the highest standards of safety, quality, and sustainability. Your success is the measure of our partnership.

## our services

- Concept Design & Detailed Engineering of Aviation Fuel Storage Facilities & Tank Farms and Refuelling Systems, Product Pipelines, Pipeline-Stations and Loading/Unloading-Stations for Trucks, Rail Wagons and Ships
- Reconstruction of Tank Storage & Pipeline Distribution Networks
- Leak Detection Control Systems (LDS) that is accepted and in compliance to standards of JIG and EI1540 with references at many international airports.
- Design, Manufacturing, Turn-Key-Installations and Maintenance of Electric, Control and Automation Simulation Software which detects under dynamic conditions pressure surges and other risks.
- Stress Analysis
- Data Measurement inside Process Plant Engineering Systems, Administrative Management Systems for inventory and refuelling can be integrated on request together with our associates and partners.
- Plant Optimization
- Project Management and site supervision throughout all phases of the project.
- Commissioning and Technical Service after handover
- Design, Finance, Build, Operate & Transfer (DFBOT) and "Open Access" modelling

## project finance & bid advisory

---

We provide end-to-end project finance and bid advisory services through expert associate partners with deep sectoral and regional knowledge. Our support spans the full project lifecycle—from financial modelling and debt syndication to bid management and contract negotiations.

With strong ties to technical, legal, and financial institutions, we help clients navigate complex transactions. Our tailored strategies have supported successful international bids, particularly in the aviation sector.

*Reducing Risk - Adding Value*

## project management

---

At PMC Engineering, we apply a customised project management approach to ensure every project meets its investment objectives while maintaining the highest standards of safety, quality, and sustainability. We recognise that each project is unique—presenting distinct challenges, contexts, and resource requirements.

Headquartered in Singapore and supported by a global team of specialist consultants, we bring the scale and expertise to deliver tailored solutions across diverse project needs. With deep industry knowledge and a focus on results, we guide projects from complexity to completion—efficiently, effectively, and with lasting value.
